AN/ASN-128B Technical Manuals

We at CECOM and PM-AEC have found out through various units in the field that the AN/ASN-128B manuals TM 11-5841-305-12 and TM 11-5841-305-20P are not available through the normal Publications system yet. To fix this problem we have placed the manuals on the PEO Aviation Internet site. The following are instructions on how to download a copy for your use:

Here are the instructions on how to get to the TMs.

1. Go to <http://www.peoavn.redstone.army.mil>
2. From there scroll down the page until you see FTP File Server. Click on it.
3. Some directories will come up. Scroll down until you see AEC directory. Click on it.
4. Click on the file Doppler2.PDF for the -20P manual and Doppler12.pdf for the -12.

Your computer must have Adobe Acrobat Reader installed on your computer to read the file.

If you have problems getting this manual via the Internet please contact MSG Noyes, PM-AEC Field Assistance Support NCO at Commercial (256) 313-0194, DSN 897-0194 and he will get you a copy.

Turning In of Unserviceable AN/ASN-128B LRUs.

The AN/ASN-128B Line Repairable Units (LRUs), the Signal Data Converter (SDC), NSN 5895-01-399-4918 and the Computer Display Unit (CDU) NSN 5841-01-399-5513, are both Army Intensive Management Items (AIMI). There are not enough of the components around to keep up with the field units requirements as well as the UH-60 Production line that the Item Manager has to support. So, we ask that you please send in your unserviceable asset prior to getting a serviceable replacement. We need your cooperation so we can get it repaired and returned to service as fast as we can. The sooner it gets sent to the Depot for repair the sooner it gets returned to service.
